

Forensics Case Report: Mobile Device Extraction & Artifact Analysis

CASE ID: 004 - Operation Alpine JTAG
EXAMINER: Maxwell Bosiako Antwi
DATE OF EXAMINATION: December 10, 2025
TOOL UTILIZED: Autopsy 4.22.1 (Digital Forensics Platform)
TARGET IMAGE: `HTC_Desire_S_JTAG.bin` (Physical/JTAG Image)

1. Executive Summary

A comprehensive mobile forensic examination was conducted on a raw physical JTAG binary image (`HTC_Desire_S_JTAG.bin`) acquired from an HTC Desire S smartphone. Utilizing **Autopsy 4.22.1**, the image was ingested and parsed across file system structures, user databases, multimedia metadata, and unallocated space.

The examination identified and extracted 11 distinct artifact categories. Findings established user identity attribution across multiple email/phone accounts, mapped physical travel patterns via EXIF and GPS bookmark data across the United States and Sweden, reconstructed two-way SMS communications, isolated suspected encrypted data, and carved over 1,600 deleted files from unallocated clusters.

2. Case Background & Ingestion Parameters

Physical extractions via JTAG bypass operating-system-level restrictions, capturing raw NAND flash memory including unallocated sectors, active SQLite databases, and deleted file remnants.

Ingestion Parameter	Details
Evidence File	<code>HTC_Desire_S_JTAG.bin</code>
Device Model	HTC Desire S (Android OS)
Acquisition Type	JTAG Physical Extraction
Forensic Platform	Autopsy v4.22.1 (64-bit)
Ingest Modules Enabled	Recent Activity, File Type Identification, Android Analyzer, EXIF Parser, Keyword Search, Data Artifact Carving

3. Comprehensive Artifact Analysis

3.1. User Attribution & Communications

1. Email Accounts

- **Location in Autopsy:** Data Artifacts → Communication Accounts → Email (3)
- **Evidence Recovered:** 5 email addresses associated with user profiles and synchronized accounts:
 - hendrix@experienced.com
 - stevie@srv.com
 - cfttmobile1@gmail.com
 - stig.orustfjord@slv.se (Swedish National Food Agency domain)
 - orustfjord@gmail.com

Source Name	S	C	O	Account Type	ID	Data Source

f0392072.vcf			0	EMAIL	orustfjord@gmail.com	HTC_Desire_S_JTAG.bin

- **Forensic Significance:** Directly ties the physical device to specific personal, professional, and regional personas, establishing lead vectors for cloud subpoenas and external correspondence tracking.

2. Phone Accounts & SIM Identifiers

- **Location in Autopsy:** Data Artifacts → Communication Accounts → Phone
- **Evidence Recovered:** 17 phone numbers stored in device memory and configuration files.

- **Forensic Significance:** Identifies historical SIM swaps, carrier affiliations, and associated international dialing profiles.

3. Contact Book

- **Location in Autopsy:** Data Artifacts → Contacts (13)
- **Evidence Recovered:** 13 complete contact records detailing associated names, mobile phone numbers, and direct email linkages.

- **Forensic Significance:** Maps the suspect's immediate social and professional network to identify co-conspirators or frequent associates.

4. Short Message Service (SMS/MMS)

- **Location in Autopsy:** Data Artifacts → Messages (13)
- **Evidence Recovered:** 13 direct SMS/MMS communication events:
 - **Incoming (5):** Originating from +12402528734
 - **Outgoing (8):** Responses sent back to +12402528734
 - **Date of Interaction:** All messages occurred in a tight operational window on February 22, 2018.

- **Forensic Significance:** Confirms an active two-way dialogue with a Maryland, USA area code (240), providing clear timestamps for timeline reconstruction.

3.2. Geolocation & Temporal Intelligence

5. Embedded GPS Bookmarks

- **Location in Autopsy:** Data Artifacts → GPS Bookmarks
- **Evidence Recovered:** 11 saved navigational coordinates clustered tightly around
- **Location:** 356 Islington Street, Urbana, MD 21704, USA

- **Forensic Significance:** Corroborates the Maryland area code observed in the SMS logs, placing the suspect's physical point of interest in the Urbana/Frederick County area.

6. System File Timestamps

- **Location in Autopsy:** Data Artifacts → Metadata
- **Evidence Recovered:** 109 parsed file system timestamps (MACB: Modified, Accessed, Created, Born).

Metadata

- **Forensic Significance:** Formulates the baseline system activity timeline to establish file lineage and identify anomalies against user-reported activity.

7. Photographic EXIF Metadata

- **Location in Autopsy:** [Analysis Results → EXIF Metadata](#)
- **Evidence Recovered:** Hardware parameters, capture timestamps, and embedded GPS tags extracted from stored image headers:

Hardware Captured	Timestamp (GMT)	Geolocation Coordinates / Address
Canon EOS 5D Mark II	2011-09-10 09:49:39	External camera transfer (No GPS embedded)
Apple iPhone 6 (Photo 1)	2015-08-16 10:43:41	Saltskärsvägen, 44298 Tjuvkil, Sweden
Apple iPhone 6 (Photo 2)	2015-08-16 10:43:41	Saltskärsvägen, 44298 Tjuvkil, Sweden

- **Forensic Significance:** Proves international travel and cross-device syncing. The Swedish coordinates directly correlate with the [.se](#) email artifact ([stig.orustfjord@slv.se](#)).

3.3. File System, Multimedia & Data Recovery

8. Suspected Cryptographic Containers

- **Location in Autopsy:** [Analysis Results → Encryption Suspected](#)
- **Evidence Recovered:** 1 high-entropy, encrypted container/file identified within user storage.
- **Forensic Significance:** Indicates deliberate attempts at data concealment or secure credential/document storage, requiring targeted key recovery or memory extraction.

9. Active Multimedia Repositories

- **Location in Autopsy:** File Views → File Types → By Extension → Images/Videos/Audio
- **Evidence Recovered:** Extensive user gallery including personal camera snapshots, downloaded audio, voice recordings, and device screenshots.
- **Forensic Significance:** Delivers visual and auditory context surrounding daily user operations, device sharing, and multimedia consumption.

10. Carved & Deleted File Fragments

- **Location in Autopsy:** File Views → Deleted Files
- **Evidence Recovered:** Extraction of over 1,600 deleted artifacts (images, documents, audio snippets, video containers), with legacy system timestamps dating back to 1980 (standard epoch/FAT placeholder markers).

The screenshot displays the Autopsy 2.10.0 interface. On the left, the 'Data Sources' pane shows 'HTC_Desire_S_JTAG.bin_1 Host' with 'File Views' expanded. Under 'File Types', 'Deleted Files' is selected. The main pane shows a table of deleted files. The table has columns: Name, S, C, O, Modified Time, Change Time, Access Time, Created Time, Size, Flags(Dir), and Flags(Me). The table lists several 'htc_wallpaper_preview' files. The bottom pane shows a preview of a deleted image file, which is a screenshot of a mobile device screen displaying a list of items.

Name	S	C	O	Modified Time	Change Time	Access Time	Created Time	Size	Flags(Dir)	Flags(Me)
htc_wallpaper_preview	1	1	1	2008-08-01 12:00:00	2014-02-02 11:42:00	2008-08-01 12:00:00	2014-02-02 11:42:00	45512	Unallocated	Allocated

- **Forensic Significance:** Demonstrates intentional or routine file pruning. Data carving successfully reconstructed deleted evidentiary items that were inaccessible via normal operating system interfaces.

11. Stored User Documents

- **Location in Autopsy:** File Views → File Types → Documents
- **Evidence Recovered:** Direct file system recovery of .pdf, .html, and .txt documents.
- **Forensic Significance:** Contains readable user notes, cached offline web forms, and portable documents relevant to financial, organizational, or operational tasks.

4. Summary Matrix of Forensic Artifacts

Category	Artifact Source	Count	Primary Forensic Value
Identity	Synced Email Accounts	5	Attribution; Swedish and American email profiles
Identity	Device Phone Profiles	17	Historical SIM registration and carrier tracking
Network	Address Book Contacts	13	Social network mapping and co-conspirator discovery
Comms	Two-Way SMS Records	13	Timed message exchange with MD area code +1240...
Location	GPS Bookmarks	11	Fixed point of interest: Urbana, Maryland, USA
Location	Photo EXIF Geotags	3	Physical presence in Tjuvkil, Sweden
Timeline	System Metadata Records	109	Temporal baseline and file lineage verification
Security	Encrypted Containers	1	Potential intentional data concealment
Media	Active Images/Audio/Video	Bulk	User behavior, personal media, visual verification
Recovery	Carved Deleted Files	1,600+	Recovery of purged evidence from unallocated sectors
Data	Static Documents	Bulk	Local text notes, manuals, and cached web data

5. Technical Insights & Investigative Lessons Learned

- **Artifact Synthesis & Cross-Corroboration:** Isolated data points carry limited weight until cross-referenced. Linking the Swedish email domain (slv.se) with the EXIF geotags in Tjuvkil, Sweden,

alongside linking the Maryland phone number (+1240...) with Urbana, MD GPS bookmarks, established an irrefutable geographic footprint.

- **Physical Acquisition Value (JTAG):** Logical and file-system extractions would have missed the 1,600+ carved deleted records and raw unallocated clusters recovered through this full binary image.
- **Anti-Forensics & Concealment Detection:** Automated entropy analysis flagged an encrypted file that evaded standard extension filters, highlighting the need to combine heuristic analysis with signature scanning.
- **Timestamp Normalization:** Timestamps originating from 1980 in carved files illustrated the necessity of identifying default system initialization dates versus actual user activity timestamps.

6. Conclusion

The forensic dissection of the `HTC_Desire_S_JTAG.bin` image provided a complete reconstruction of user identity, movement, and communication cycles across multiple jurisdictions. The technical methodology highlighted in this report validates the critical importance of low-level physical acquisition, automated artifact extraction, and multi-artifact timeline correlation in modern digital forensics.
