PROFESSIONAL PROFILE

I am a licensed **Digital Forensics Professional** by the **Cyber Security Authority (CSA), Ghana**, specializing in **Digital Forensics and Incident Response (DFIR)**. My work spans forensic analysis, threat detection, malware examination, and evidence preservation across complex enterprise environments.

EDUCATION

Ashesi University

BSc. Computer Engineering

Accra, Ghana

Graduated: June 2025

Relevant Coursework: Machine Learning, Networking, Data Structures & Algorithms, IoT, Operating Systems, Databases, Embedded Systems, Datascience

PROFESSIONAL CREDENTIALS & AWARDS

- | | |
|--|--------------------|
| • Digital Forensics Professional License , Issued by the Cyber Security Authority Ghana | Jan 2026 |
| • Certified Computer Forensics Analyst (CCFA) , eSecurity Institute | June 2026 |
| • Digital Forensics & Investigation Training Certificate , HIVE Consults | Oct 2025 |
| • MasterCard Foundation Scholars Program (Full Scholarship) , Ashesi University | 2021 - 2025 |
| • Cybersecurity Professional Certificate , Google | Oct 2024 |
| • Certified in Cybersecurity (CC) , ISC ² | May 2024 |
| • Security, Compliance, & Identity Fundamentals (SC-900) , Microsoft | June 2024 |

PROFESSIONAL SECURITY EXPERIENCE

Digital Forensics & Incident Response Analyst, HIVE Consult Forensics Lab

Nov 2025 – Present

- Executed forensic examinations on multi-platform environments (Windows, Android, iOS).
- Enforced chain-of-custody and documentation standards, ensuring forensic admissibility.
- Analysed malware and credential fraud, converting technical telemetry into high-level reports that facilitated risk-based decision-making for clients.

IT Support & Networks Infrastructure, Ashesi University (IT, Networking & Security) July 2025 – July 2026

- Evaluate enterprise network posture, applying VLAN segmentation standards and firewall rules to secure critical infrastructures.
- Deployed Suricata-based Network Intrusion Detection System (NIDS) to capture packet telemetry, identifying anomalies and mitigating threats to ensure 24/7 system availability.
- Optimized internal network performance, maintaining a stable environment for sensitive academic and administrative data.

Web Application Penetration Tester, Hack Secure Internship

April – May 2025

- Conducted ethical hacking on a vulnerable web application, identifying critical vulnerabilities like SQL Injections, XSS, insecure file upload handling, trajectory traversal.
- Documented each vulnerability with technical descriptions, exploitation steps, screenshots and proposed remediations for securing the system.

Senior Technical Writer & Security Researcher, Educ8Africa

Jan – June 2025

- Spearheaded advanced cybersecurity education initiatives, designing and directing a structured mentorship program focused on security engineering, professional certifications, and foundational research methodologies.
- Managed the firm's primary security intelligence blog, authoring and peer-reviewing technical research papers on emerging cyber threat vectors, cryptographic vulnerabilities, and modern adversarial TTPs.

APPLIED CYBERSECURITY PROJECTS

ThreatHunter AI: Autonomous SOC Triage Platform , *Agentic AI / Threat Detection* **April 2026 – Present**

- Building a web-based threat detection platform that ingests live multi-source enterprise logs (Suricata NIDS, Sysmon, and Windows/Linux auth events) to provide centralized infrastructure security visibility.
- Architected a 40-rule correlations engine mapping adversarial telemetry directly to the MITRE ATT&CK matrix, reducing manual lookup overhead and providing instantaneous situational context.

Anti-Forensics Detection & Adversarial NTFS Analysis — Independent Lab Study **June 2026**

- Deployed a controlled timestomping attack via PowerShell Win32 API calls to backdate \$STANDARD_INFORMATION timestamps, then exposed the manipulation through raw \$MFT analysis using MFTECmd, corroborating the moment of fraud with millisecond precision.
- Demonstrates the adversarial-evidence problem at the core of my research agenda: a system can have complete, internally consistent logs that have still been deliberately shaped, the same structural challenge that AI agent incident logging must be designed to resist.

SensePay: ML-Powered Relay Attack Prevention, *Behavioural Anomaly Detection* **Sept 2024–June 2025**

- Developed a behavioral anomaly detection system to mitigate NFC-based contactless financial payment relay attacks, achieving 96.7% fraud detection accuracy at under 300ms latency.
- Developed a lightweight One-Class SVM model to evaluate payment device orientation and movement vectors, effectively stopping live physical data manipulation without impacting user experience.

Cybersecurity Governance Analyst, *Goldman Sachs Virtual Experience* **Oct - Nov 2023**

- Conducted security assessment using Hashcat to crack system passwords, identifying critical security risks
- Analysed and documented technical requirements for hypothetical client products, enhancing communication between business and development teams.

TECHNICAL SKILLS

- **Governance & Compliance:** NIST Framework, Regulatory Data Privacy, Chain-of-Custody, Risk Assessment, Incidence Response
- **Threat Analysis & Forensics:** Magnet AXIOM, Volatility (Memory Forensics), Autopsy, FTK Imager, MFTEcmd (MFT Parsing), Shellbag Explorer, Hex Editors (HxD), MITRE ATT&CK Framework, Threat Profiling.
- **Networking & Protocols:** TCP/IP, DNS, SSH, VPN, VLANs, Packet Analysis, Wireshark, Firewall management.
- **Penetration Testing:** Burp Suite, Nmap, Hashcat, John the Ripper, DirBuster, OWASP Top 10, Cowries Honeypot
- **Programming & Languages:** Python (NumPy, Pandas, PyTorch), Bash, C++, Java, JavaScript, SQL.
